

Intersec Dubai 2018

From 21st to 23rd January, Golmar took part at Intersec 2018. Intersec is the most important trade exhibition in the middle east for commercial security and fire.

In that edition Golmar presented the last developments on IP technologies under its brand Beoview. One of the launchings is the new monitor Beoview7 Lite, which offers the same features than the successful Beoview7 but in a white plastic enclosure.

Golmar presented the new and revolutionary technology: Gtwin, a new 2 wires non-polarized BUS. That BUS is specially designed for large building compounds, where an important amount of cable is involved. Easy-programming and easy-wiring define Gtwin as one of the most simple and powerful 2 wires BUS technologies in the market.

Golmar stays at the vanguard of the technology and the revolution of the IoT. The introduction of the special gateways for the systems Gtwin and IP, makes possible to stay connected anywhere and to answer who calls our door from anywhere in the world from a smartphone.

Golmar introduced in this event a new range of CCTV, composed by AHD and IP cameras up to 4 MPx, as well as a range of DVR and NVR. With the introduction of this new product line, Golmar becomes a one-stop supplier for the security integrators of the region.

We would like to thank all those visitors and customers who approached our booth.
