

International meeting 2018

Golmar met its international distributors the first quarter of the year with the purpose of holding an European convention.

Mr. Golarons, CEO of the company, opened this convention with the summary of the evolution of the past year and made an introduction of the company's strategic plan for the coming years, in terms of new developments and market diversification.

One of the main purposes of this meeting was to introduce the new two wires system called Gtwin, which Golmar will present at the end of 2018 at international level. This system will open new opportunities and projects, thanks to its simple 2-wire installation, its high capacity reaching more than 4000 apartments per installation and its interesting features, such as the transfer of a call to a mobile App or the intercommunication between users of the same trunk .

Another very interesting point was the introduction of the new range of CCTV cameras, DVR and NVR Golmar branded. Golmar has approved an important investment to initiate the distribution of CCTV worldwide with all product ranges on AHD and IP technology.

During the meeting the company invited the customers to visit one of the most emblematic companies in Catalonia, the manufacturer of Cavas Codorniu. Attendees had the opportunity to visit this century-old company, learn about its history and discover its old cellars.

This event was a great opportunity to strengthen the relations between Golmar and its distributors, as well as to develop networking among the different companies to share the market trends, new products and experiences with Golmar.
